

ViaBill Odoo 19 Payment Provider Documentation

1. Introduction

This document provides a complete guide for merchants on how to install, configure, and use the ViaBill Payment Provider module for Odoo 19. This module seamlessly integrates ViaBill as a payment option into your Odoo eCommerce store, allowing customers to pay in instalments. It also includes the ViaBill PriceTag feature, which displays instalment pricing directly on your product, cart, and checkout pages to improve conversion.

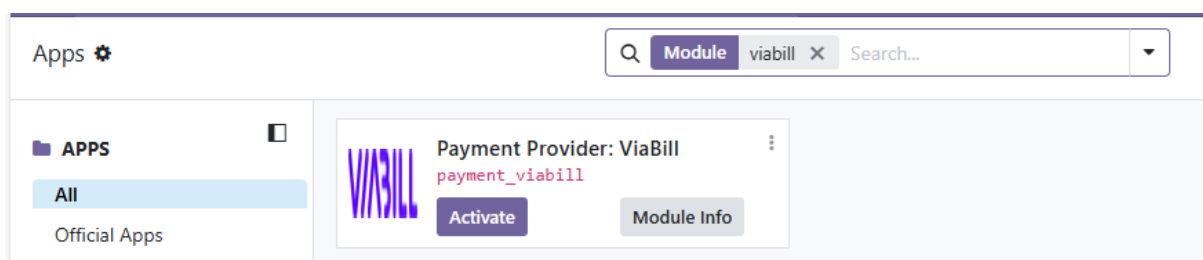

Key Features

- **Full Payment Flow:** Supports authorization, capture (full and partial), refunds (full and partial) and cancelation of authorized only payments.
- **ViaBill PriceTag:** Dynamically displays instalment pricing on product, cart, and checkout pages.
- **Customisable Configuration:** Extensive settings to control API mode, transaction types, order states, and PriceTag appearance.
- **Secure Credential Management:** Easy login and registration directly from the Odoo backend.
- **Debug & Troubleshooting:** Built-in logging to diagnose API communication issues.
- **Multi-language Support:** Fully translated for English, Danish, and Spanish.

2. Installation

To install the module, you must have access to your Odoo server's addons directory.

- 1 **Upload the Module:** Unzip the [payment_viabill.zip](#) file and upload the resulting [payment_viabill](#) folder to your Odoo [addons](#) directory.
- 2 **Restart Odoo:** Restart your Odoo server to make the new module available.
- 3 **Update Apps List:** Navigate to **Apps** and click **Update Apps List** in the menu. A confirmation dialog will appear; click **Update**.
- 4 **Install the Module:** In the **Apps** menu, search for [ViaBill](#) and click the **Activate** button on the "ViaBill Payment Provider" module.

Once the installation is complete, the ViaBill payment provider will be available to configure.

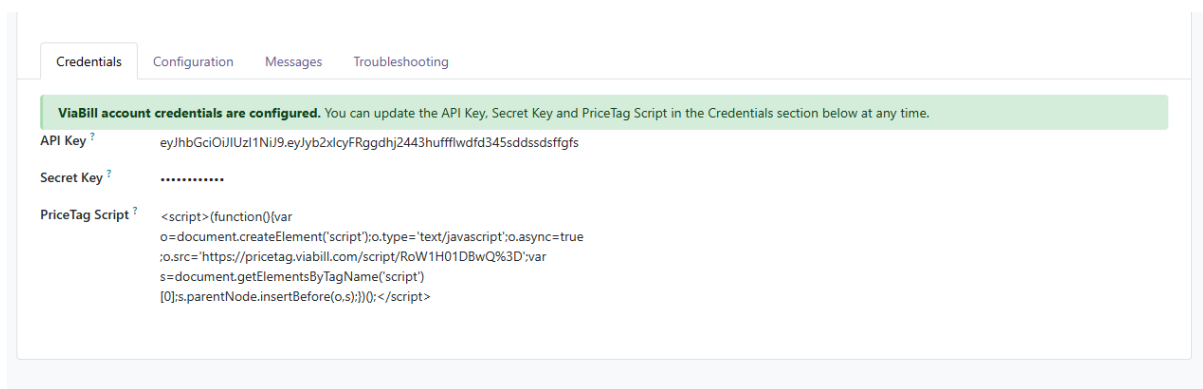

3. Configuration

After installation, you must configure the ViaBill payment provider with your account credentials and preferred settings.

Navigate to **Invoicing** → **Configuration** → **Payment Providers** and open **ViaBill** from the list.

3.1. Credentials Tab

This tab manages your connection to ViaBill. If you have an existing ViaBill account, please use the account credentials from your ViaBill merchant account. If you do not have an account yet, you can use sign up form at <https://portal.viabill.com/signup>

The screenshot shows the 'Credentials' tab in the configuration interface. At the top, there are four tabs: 'Credentials', 'Configuration', 'Messages', and 'Troubleshooting'. Below the tabs, a green message bar states: 'ViaBill account credentials are configured. You can update the API Key, Secret Key and PriceTag Script in the Credentials section below at any time.' The main content area contains three fields: 'API Key' with a value 'eyJhbGciOiJIUzI1Ni9yY29yZFRgZGhj2443huffllwdfdf345sddssdsffgfs', 'Secret Key' with a value represented by asterisks '*****', and 'PriceTag Script' with a JavaScript snippet: '<script>(function(){var o=document.createElement("script");o.type="text/javascript";o.async=true;o.src="https://pricetag.viabill.com/script/RoW1H01DBwQ%3D";var s=document.getElementsByTagName("script")[0];s.parentNode.insertBefore(o,s);})();</script>'.

Field	Description
API Key	Your public ViaBill merchant key.
Secret Key	Your private ViaBill secret for signing requests. For security, the saved value is displayed as asterisks.
PriceTag Script	The JavaScript snippet provided by ViaBill to enable the PriceTag widget.

3.2. Configuration Tab

This tab contains the core settings for how ViaBill functions in your store.

The screenshot shows the 'ViaBill' configuration page. At the top is a navigation bar with 'Invoicing', 'Customers', 'Vendors', 'Reporting', and 'Configuration'. Below this is a sub-header with 'New', 'Payment Providers', and 'ViaBill'. The main content area is titled 'ViaBill' and includes a 'State' dropdown set to 'Enabled', a 'Company' field set to 'YourCompany', and a 'Website' field. Below these are tabs for 'Credentials', 'Configuration' (selected), 'Messages', and 'Troubleshooting'. The 'Configuration' tab is divided into four sections: 'PAYMENT FORM' (with 'Payment Methods' set to 'ViaBill' and 'Capture Amount Manually' checked), 'PAYMENT FOLLOWUP' (with 'Payment Journal' set to 'Bank' and 'Refund' set to 'Full & Partial'), 'AVAILABILITY' (with 'Maximum Amount' set to '0.00', 'Currencies' and 'Countries' set to empty), and 'VIABILL PAYMENT SETTINGS' (with 'API Mode' set to 'Test' and 'Transaction Type' set to 'Authorize Only').

Payment Form

Field	Description
Payment Methods	The specific payment methods to associate with ViaBill (e.g., Visa, Mastercard). Leave empty to support all.
Capture Amount Manually	When checked, payments are only authorized at checkout. You must manually capture the funds later from the sales order. When unchecked, payments are captured automatically.

Availability

Field	Description
Maximum Amount	The maximum order total allowed for ViaBill payments. Leave at 0.00 for no limit.

Field	Description
Currencies	Restrict ViaBill to specific currencies. It is recommended that you restrict the ViaBill Payments to DKK for Danish merchants and EUR for Spanish merchants.
Countries	Restrict ViaBill to customers from specific countries. Leave empty to make it available everywhere.

ViaBill Payment Settings

Field	Description
API Mode	Test for development and testing (uses ViaBill's sandbox). Production / Live for processing real payments.
Transaction Type	Authorize Only to reserve funds on the customer's card, requiring manual capture. Authorize and Capture to capture the authorized payments automatically.

3.3. PriceTag Settings

The module includes the ViaBill PriceTag, a widget that shows customers the instalment price for a product or order. This section, located at the bottom of the **Configuration** tab, controls its appearance and behaviour. The PriceTag is a key conversion tool, since it increases average order value by making larger purchases feel affordable and improves conversion rate by removing price-related purchase hesitation. For these reasons it is highly recommended that you enable PriceTags in all possible locations. You can optionally use the custom CSS section to fine tune the placement of the PriceTags.

ViaBill PriceTag displayed on the cart summary.

Field	Description
Show PriceTag on Product Page	Enable to display the widget on product pages.
Show PriceTag on Cart Page	Enable to display the widget in the cart summary.
Show PriceTag on Checkout Page	Enable to display the widget on the final payment page.
PriceTag Country	Sets the country for the widget. Defaults to your shop's country.

Field	Description
PriceTag Language	Sets the language for the widget. Defaults to the user's browser language.
Custom CSS / JavaScript	Advanced options to inject custom code for styling or modifying the widget.
PriceTag Selectors	Advanced fields that tell the widget where to find the price on the page. The default values work for standard Odoo themes.

3.4. Messages Tab

This tab allows you to customize the messages shown to customers at different stages of the payment process.

3.5. Troubleshooting Tab

This tab contains a debug log for technical diagnostics.

Field	Description
Enable Debug	When checked, all API requests and responses between Odoo and ViaBill are logged. Warning: This may store sensitive data and should be disabled in a production environment.
Debug Log	Displays the last 50 log entries when debug mode is active.
Clear Log	Manually clears the debug log.

4. Usage

4.1. Accepting Payments

Once enabled and configured, ViaBill will appear as a payment option on your checkout page. Customers can select it and will be redirected to ViaBill to complete their payment. After a successful payment, they are redirected back to your shop's confirmation page.

4.2. Capturing and Refunding Payments

If you have **Capture Amount Manually** enabled, you must capture the funds for each order.

1. Navigate to the **Sales Order** that was paid for with ViaBill.
2. Click the **Capture Transaction** button.
3. A dialog will appear to confirm the amount. You can capture the full amount or a partial amount.

5. Uninstallation

To disable or completely remove the module:

5.1. Disabling the Provider

If you only want to temporarily hide ViaBill as a payment option, you can disable it.

1. Navigate to **Invoicing** → **Configuration** → **Payment Providers**.
2. Open **ViaBill**.
3. Set the **State** to **Disabled**.

5.2. Uninstalling the Module

To permanently remove the module and all its configuration:

1. Navigate to the **Apps** menu.
2. Search for ViaBill.
3. Click the three-dot menu on the module card and select **Uninstall**.

Odoo will ask for confirmation. After uninstalling, all ViaBill configuration data will be removed from your database.
